

BSCMail User Guide

Introduction

BSCMail is a volunteer-management and scheduling application suitable for use by non-profit and for-profit organizations alike. It is easy to use and customizable to meet virtually any need.

BSCMail is distributed under the GNU General Public License. Please read the file LICENSE or visit <http://www.gnu.org/licenses/> for details.

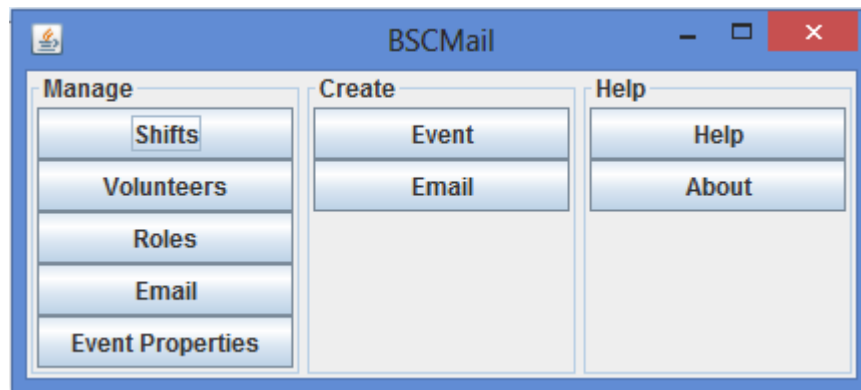

This guide corresponds to BSCMail version 3.3.

Tutorial

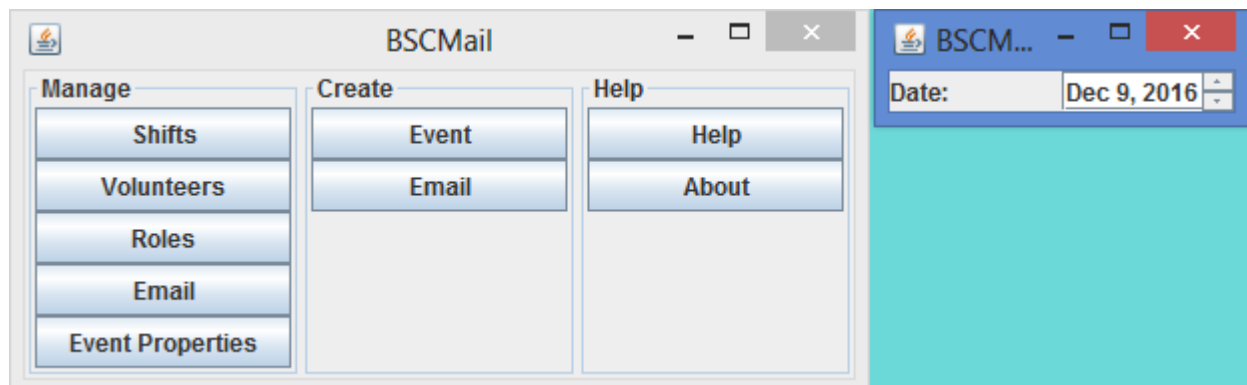

What is BSCMail?

BSCMail is an application that helps an organization manage volunteers and send scheduling emails. Let's run through some of the features of BSCMail together.

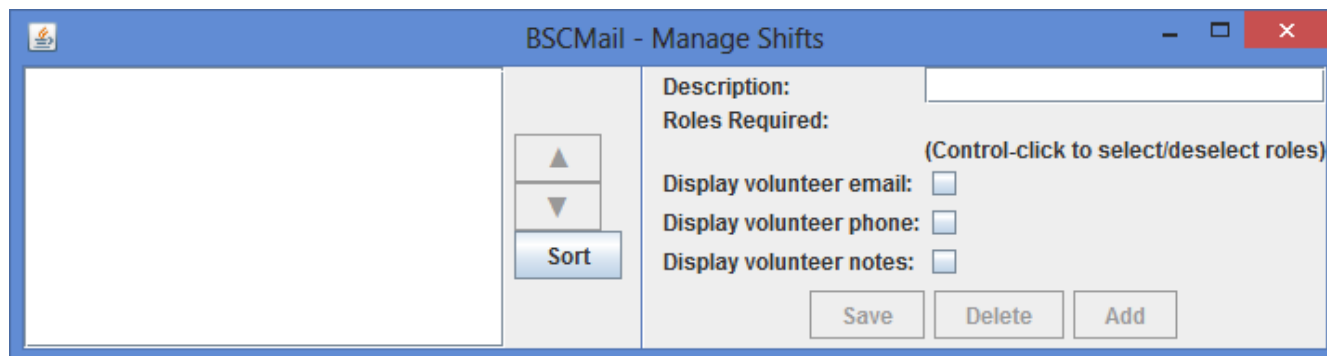

When you launch BSCMail, you see the [Main Window](#).

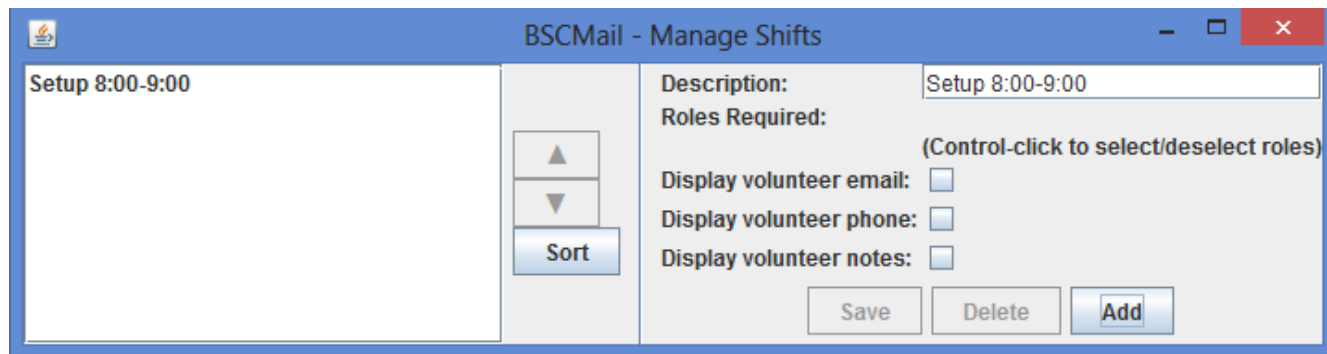

You're running an event, so click the **Event** button in the **Create** column.

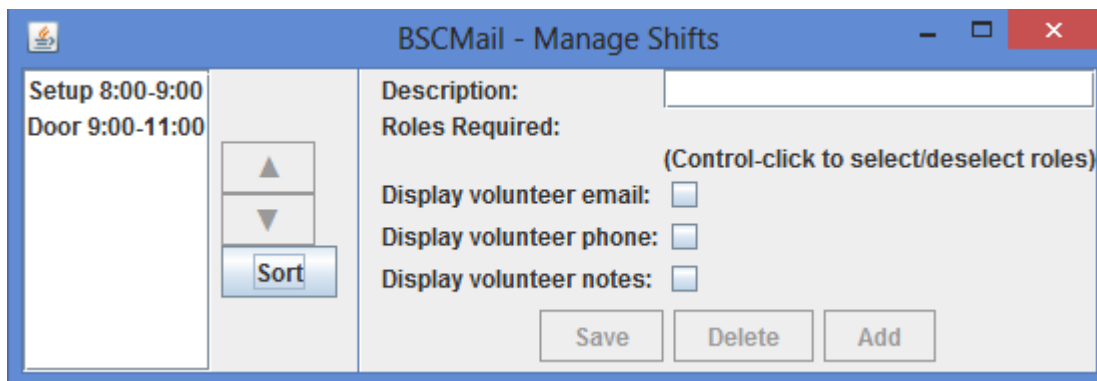

Hm. There's not much to do here. You can change the date of the event and... not much else. We need to add more definition to the event. Let's add some volunteer shifts. Click the Shifts button in the Manage column of the main window to launch the [Manage Shifts Window](#). You can leave the Event Setup window open.

The screenshot shows the 'BSCMail - Manage Shifts' window. On the left is a large empty list box. In the center are three buttons: an up arrow, a down arrow, and a 'Sort' button. On the right is a form with a 'Description:' text box, a 'Roles Required:' label with a note '(Control-click to select/deselect roles)', and three checkboxes for 'Display volunteer email:', 'Display volunteer phone:', and 'Display volunteer notes:'. At the bottom right are 'Save', 'Delete', and 'Add' buttons.

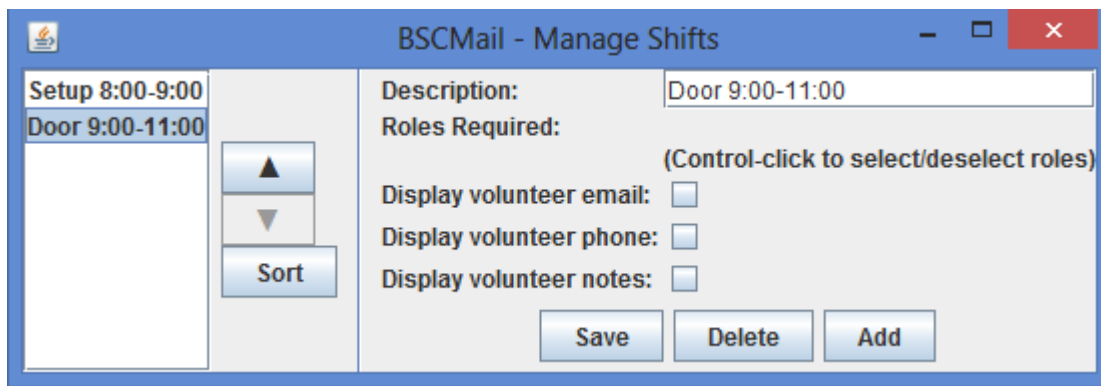

There are no shifts defined in the application. Let's create one. Click in the **Description** text box, type "Setup 8:00-9:00", and then click the **Add** button.

The screenshot shows the 'BSCMail - Manage Shifts' window after adding the first shift. The list box on the left now contains the text 'Setup 8:00-9:00'. The 'Description:' text box on the right also contains 'Setup 8:00-9:00'. The 'Add' button is highlighted with a blue border.

Let's add another shift. Change the text in the **Description** text box to "Door 9:00-11:00" and click the **Add** button.

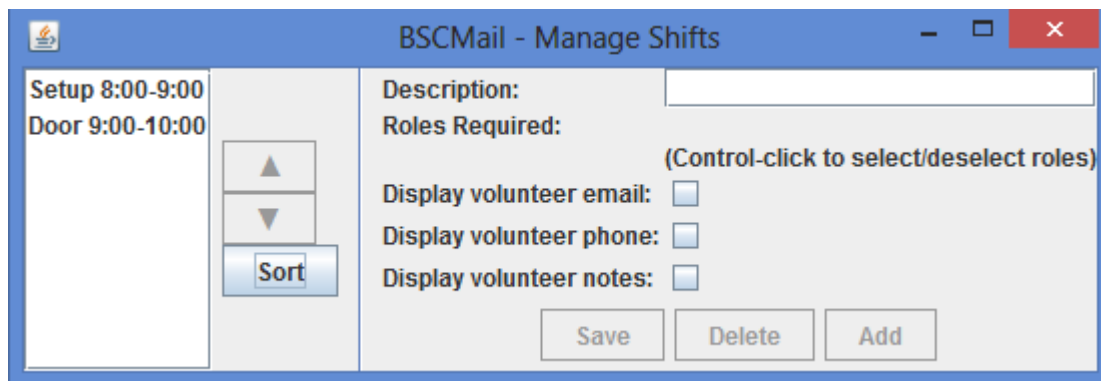

The screenshot shows the 'BSCMail - Manage Shifts' window with two shifts in the list box: 'Setup 8:00-9:00' and 'Door 9:00-11:00'. The 'Description:' text box on the right is empty. The 'Add' button is highlighted with a blue border.

Oops! We made an error; the shift goes until 10:00, not 11:00. Select the shift in the list on the left.

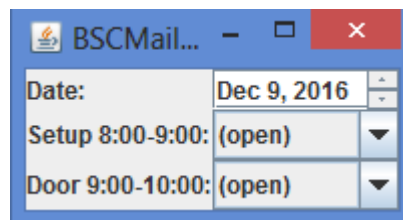

The 'BSCMail - Manage Shifts' window has a left sidebar with a list of shifts: 'Setup 8:00-9:00' and 'Door 9:00-11:00'. Below the list are up/down arrow buttons and a 'Sort' button. The main area contains a 'Description:' text box with 'Door 9:00-11:00' entered. Below it is a 'Roles Required:' section with a note '(Control-click to select/deselect roles)'. There are three checkboxes: 'Display volunteer email:', 'Display volunteer phone:', and 'Display volunteer notes:'. At the bottom right are 'Save', 'Delete', and 'Add' buttons.

Edit the description of the shift and click the **Save** button.

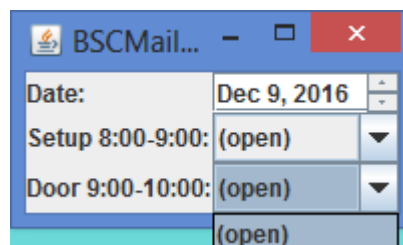

The 'BSCMail - Manage Shifts' window is shown after editing. The 'Description:' text box is now empty. The 'Roles Required:' section and checkboxes remain the same. The 'Save', 'Delete', and 'Add' buttons are still present.

Take another look at the Event Setup window.

The 'BSCMail...' Event Setup window shows a 'Date:' field set to 'Dec 9, 2016'. Below it are two shift entries: 'Setup 8:00-9:00:' and 'Door 9:00-10:00:', each followed by a dropdown menu showing '(open)'.

The shifts you added automatically appeared. Most of the changes you will make in other screens will automatically be reflected in the Event Setup window. Now let's try to assign a volunteer to one of the shifts. Click one of the dropdown boxes next to the shifts.

The 'BSCMail...' Event Setup window is shown with an error. The 'Date:' field is 'Dec 9, 2016'. The 'Setup 8:00-9:00:' and 'Door 9:00-10:00:' dropdowns show '(open)'. A new, empty dropdown box has appeared below them, also showing '(open)', indicating no volunteers are assigned.

Whoops! We don't have any volunteers defined. Go back to the Main Window and click the **Volunteers** button in the **Setup** column to launch the [Manage Volunteers Window](#).

The window titled "BSCMail - Manage Volunteers" features a large empty list on the left. To the right of the list are three buttons: an up arrow, a down arrow, and a "Sort" button. Further right is a form with fields for "Name:", "Email:", "Phone:", "Notes:", and "Roles:". Below the "Roles:" field is the text "(Control-click to select/deselect roles)". At the bottom right are three buttons: "Save", "Delete", and "Add".

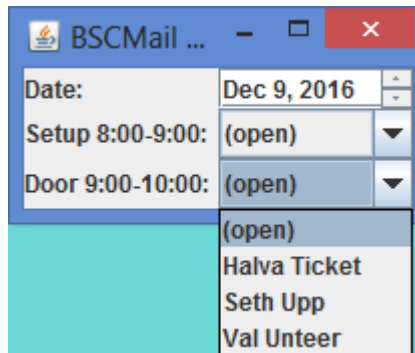

The Manage Volunteers Window works similarly to the Manage Shifts Window. Let's enter a few volunteers. Enter the volunteer's name, email address, and phone number in the appropriate text boxes and click the **Add** button. Do this a few times to create some volunteers.

The window now displays three volunteers in the list: "Seth Upp", "Val Unteer", and "Halva Ticket". The "Halva Ticket" entry is selected. The form fields are populated with: "Name: Halva Ticket", "Email: halva@ticket", "Phone: 555-HALVA", and "Active: ☒". The "Roles:" field remains empty with the instruction "(Control-click to select/deselect roles)". The "Save", "Delete", and "Add" buttons are still present at the bottom right.

You can select a volunteer and move it up or down in the list by clicking the ▲ or ▼ buttons. You can also sort them alphabetically by clicking the **Sort** button. Try clicking it now.

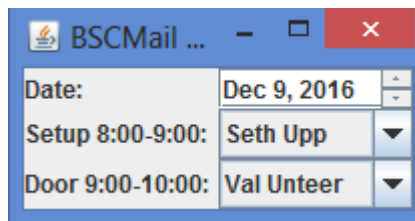

After clicking the "Sort" button, the list is now sorted alphabetically, showing "Halva Ticket", "Seth Upp", and "Val Unteer". The "Halva Ticket" entry remains selected. The form fields and buttons are unchanged from the previous state.

Notice that the volunteers have been sorted. Now let's assign them to the shifts for the event. Go to the Event Setup Window and try clicking on one of the dropdowns again.

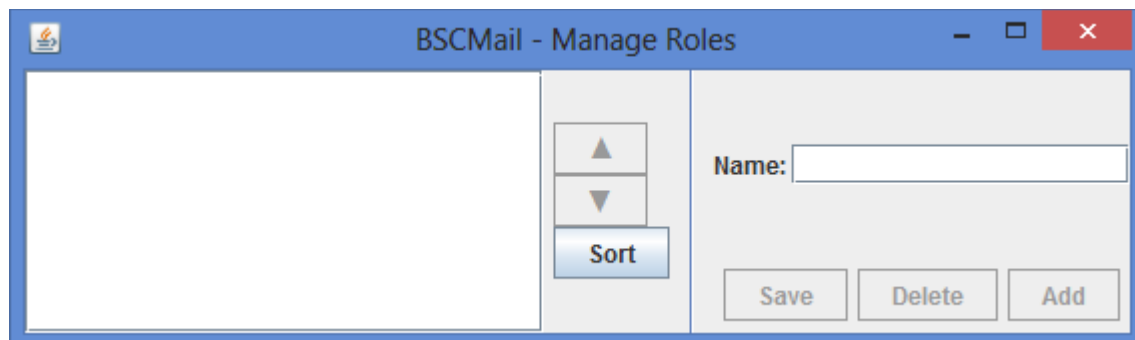

The screenshot shows the BSCMail Event Setup window. It has a title bar with a flame icon and the text 'BSCMail ...'. Below the title bar, there are three rows of shift information. The first row is 'Date: Dec 9, 2016'. The second row is 'Setup 8:00-9:00: (open)' with a dropdown arrow. The third row is 'Door 9:00-10:00: (open)' with a dropdown arrow. The dropdown menu for the 'Door 9:00-10:00' shift is open, showing a list of volunteers: '(open)', 'Halva Ticket', 'Seth Upp', and 'Val Unteer'.

Good, we have some volunteers. Select some volunteers from the dropdowns to assign them to the shifts.

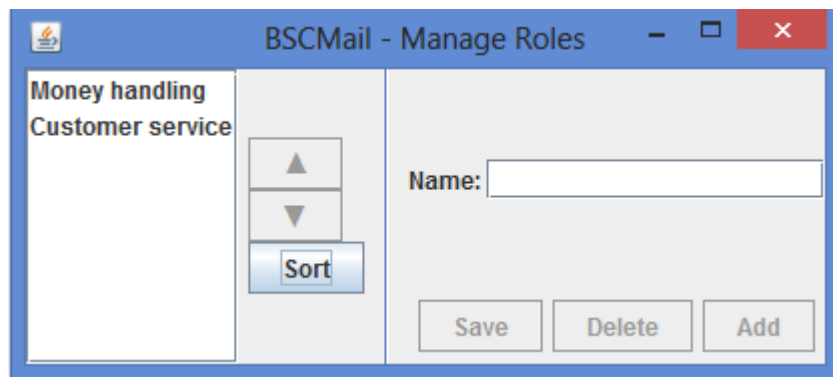

The screenshot shows the BSCMail Event Setup window with the same layout as before. The 'Date' is 'Dec 9, 2016'. The 'Setup 8:00-9:00' shift now has 'Seth Upp' selected in the dropdown. The 'Door 9:00-10:00' shift now has 'Val Unteer' selected in the dropdown.

Great! We're able to use BSCMail to schedule volunteers now. But we can add a little bit of sophistication to the way we schedule. Suppose we want to restrict a shift to a certain subset of volunteers. (For instance, suppose we want to restrict the Door 9:00-10:00 shift to a set of volunteers who are trusted to handle money.) To do this, we need to create some volunteer roles. Go back to the Main Window and click the **Roles** button in the **Setup** column to launch the [Manage Roles Window](#).

The screenshot shows the 'BSCMail - Manage Roles' window. It has a title bar with a flame icon and the text 'BSCMail - Manage Roles'. The window is divided into two main sections. On the left, there is a large empty rectangular area. To its right, there are two small buttons with up and down arrows, and a 'Sort' button below them. On the right side of the window, there is a 'Name:' label followed by a text input box. Below the input box, there are three buttons: 'Save', 'Delete', and 'Add'.

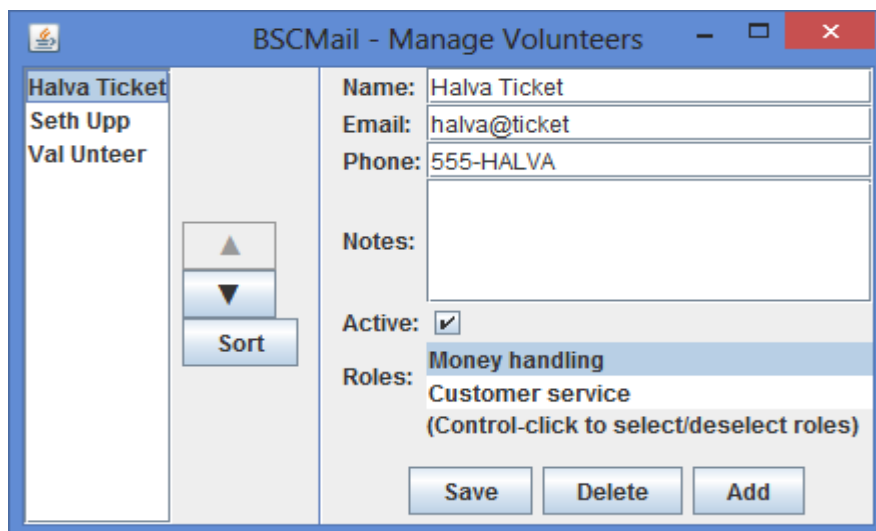

The Manage Roles Window works similarly to the Manage Shifts Window and Manage Volunteers Window. Let's add a new role. Type "Money handling" in the **Name** text box and click the **Add** button. While we're at it, let's add another role called "Customer service".

Good. Now let's assign a role to the door shift. Return to the Manage Shifts Window and select the Door 9:00-10:00 shift.

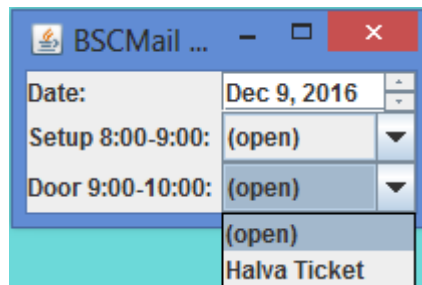

When you select a shift, all the defined volunteer roles are listed in the right pane. All the roles required by the shift will show up as selected. As you can see, no roles have been selected for this shift. Select the “Money handling” role and click the **Save** button.¹ Now we need to assign this role to a volunteer. Return to the Manage Volunteers Window and select a volunteer. Select the “Money handling” role and click the **Save** button.

¹To select multiple roles, hold the **Ctrl** button while you click. Ctrl+click toggles an individual role on or off.

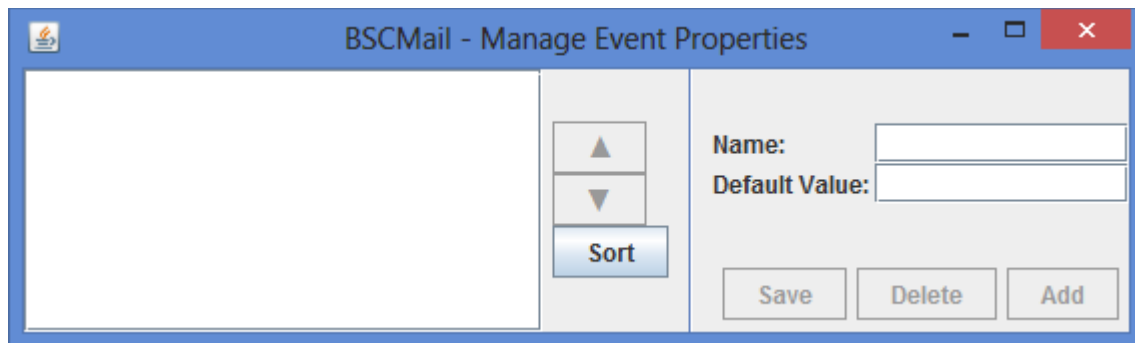

Now return to the Event Setup Window. Click the dropdown next to the Door 9:00-10:00 shift.

The screenshot shows a window titled "BSCMail ...". It contains a table with the following data:

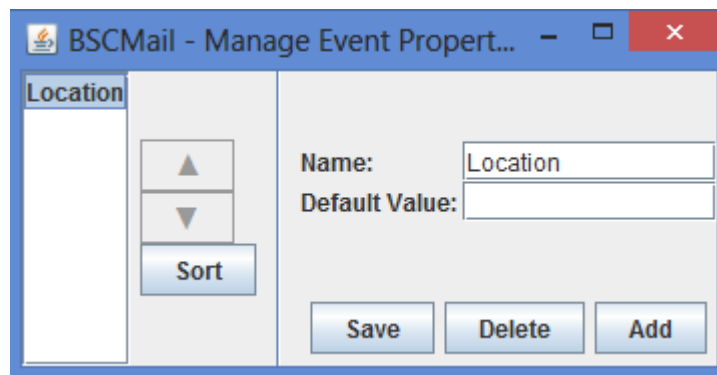

Date:	Dec 9, 2016
Setup 8:00-9:00:	(open)
Door 9:00-10:00:	(open)
	(open)
	Halva Ticket

Notice that only the volunteers with the appropriate roles are listed! It would be nice, however, if we could add a bit more information to the event, such as the location. (The event moves around from week to week.) Go back to the Main Window and click the **Event Properties** button in the **Manage** column to launch the [Manage Event Properties Window](#).

The screenshot shows a window titled "BSCMail - Manage Event Properties". It has a large empty list box on the left, a "Sort" button below it, and a "Name:" text box on the right. Below the "Name:" text box is a "Default Value:" text box. At the bottom right are "Save", "Delete", and "Add" buttons.

The Manage Event Volunteers Window works similarly to the Manage Shifts Window, Manage Volunteers Window, and Manage Role Window. Let's add a new property. Type "Location" in the **Name** text box and click the **Add** button.

The screenshot shows the same window as before, but now the "Name:" text box contains the text "Location". The "Default Value:" text box is empty. The "Add" button is highlighted.

Now return to the Event Setup Window.

Notice that “Location” has been added to the Event Setup Window. We can type any value into this field. Enter a location.

It is possible to enter a default value for a property. (Say, if the event can move from week to week but is usually in one specific place.) Return to the Manage Event Property Window, select “Location” from the list and enter a default value.

The Event Setup Window will display the default value for any event property when it is first opened. You may change value for the event by typing in the Event Setup Window. (This will not affect the default value.)

The event is looking pretty good now. Let’s create the scheduling email. Assign some volunteers to the shifts, then go back to the Main Window and click the **Email** button in the **Create** column to launch the [Event Email Text Window](#).

To: seth@upp, halva@ticket

Subject:

Text:

Date: Friday December 9
Location: 730 Massachusetts Ave., Auditorium

Setup 8:00-9:00: Seth Upp
Door 9:00-10:00: Halva Ticket

Actions: Generate Email

Well, that's helpful at least. The email addresses of all the volunteers are listed in the **To** field, and the event properties and volunteer schedule have been placed in the **Text** field. It would be nice if we could add a bit more detail, though. Close this window, return to the Main Window, and click the **Email** button in the **Manage** column to launch the [Manage Email Window](#).

The image shows a window titled "BSCMail - Manage Email". On the left is a grey sidebar with four labels: "Pre-schedule text:", "Post-schedule text:", "Subject line template:", and "Date format string:". To the right of these labels are input fields. The "Pre-schedule text:" and "Post-schedule text:" fields are large text areas. The "Subject line template:" and "Date format string:" fields are smaller text boxes. The window has a blue title bar and standard Windows window controls (minimize, maximize, close) in the top right corner.

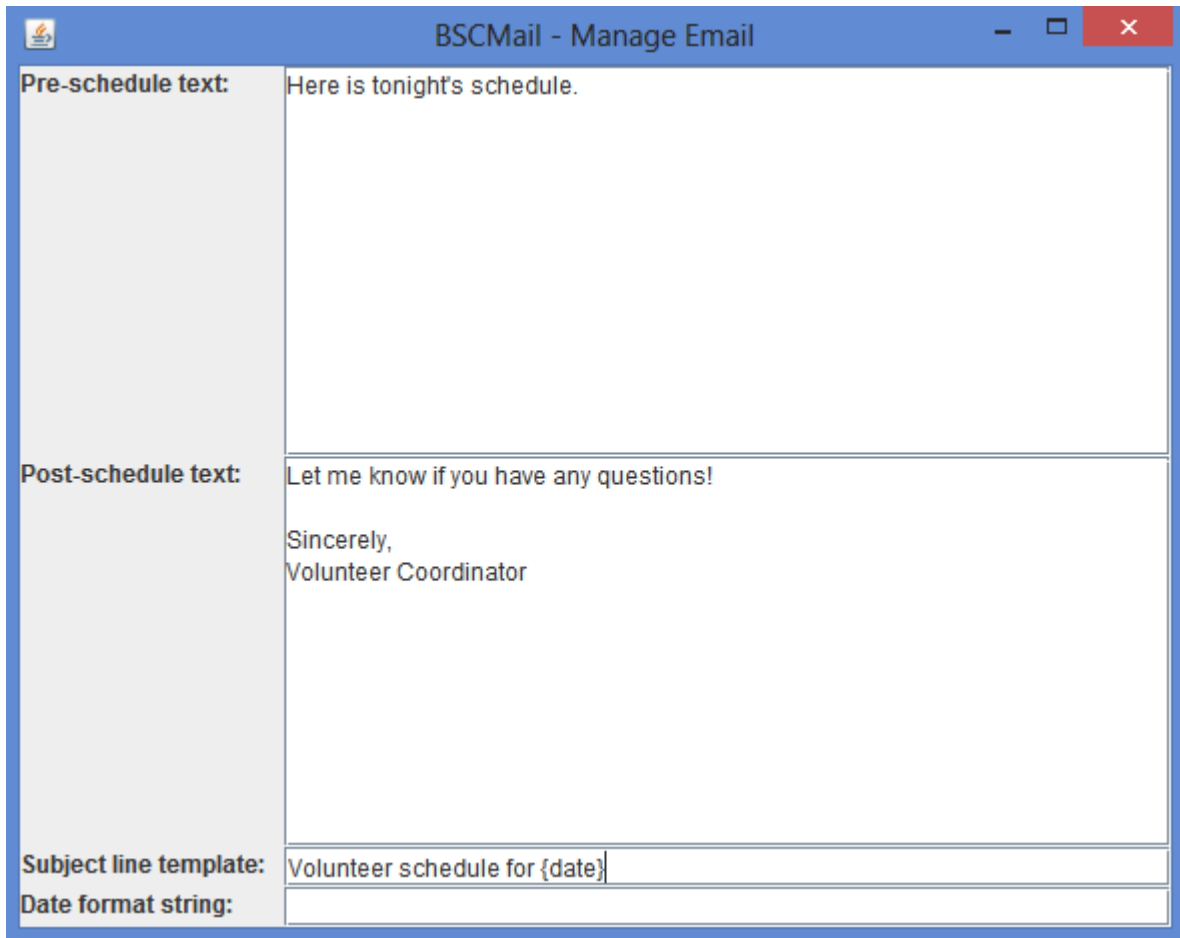

This window allows you to define the email template. The text in the **Pre-schedule text** field will appear before the event schedule, while the text in the **Post-schedule text** field will appear after. Try typing some text into these fields. The text will be automatically saved as you type.

BSCMail - Manage Email	
Pre-schedule text:	Here is tonight's schedule.
Post-schedule text:	Let me know if you have any questions! Sincerely, Volunteer Coordinator
Subject line template:	
Date format string:	

Now re-open the Email Text Window.

BSCMail - Event Email Text	
To:	seth@upp, halva@ticket
Subject:	
Text:	Here is tonight's schedule. Date: Friday December 9 Location: 730 Massachusetts Ave., Auditorium Setup 8:00-9:00: Seth Upp Door 9:00-10:00: Halva Ticket Let me know if you have any questions! Sincerely, Volunteer Coordinator
Actions:	Generate Email

That's certainly better, but we're missing a subject line. Return to the Manage Email Window and enter some text in the **Subject line template** field. The text will be saved automatically as you type.

The screenshot shows a window titled "BSCMail - Manage Email" with a blue border and standard window controls. The window is divided into a left sidebar with labels and a main content area with text input fields.

Pre-schedule text:	Here is tonight's schedule.
Post-schedule text:	Let me know if you have any questions! Sincerely, Volunteer Coordinator
Subject line template:	Volunteer schedule for {date}
Date format string:	

The "{date}" character sequence is special and represents the event date. BSCMail will automatically replace it with the event date.

Now open the Event Email Text window once more.

The screenshot shows a window titled "BSCMail - Event Email Text". It contains a form with the following fields:

- To:** seth@upp, halva@ticket
- Subject:** Volunteer schedule for Friday December 9
- Text:**

Here is tonight's schedule.

Date: Friday December 9
Location: 730 Massachusetts Ave., Auditorium

Setup 8:00-9:00: Seth Upp
Door 9:00-10:00: Halva Ticket

Let me know if you have any questions!

Sincerely,
Volunteer Coordinator
- Actions:** Generate Email

Now that's a good-looking email! You can edit any of the fields in this window; it will not change the email template. You can copy and paste the text into an email program, or click the **Generate Email** button to automatically send an email from your default email program.

We have reached the end of this tutorial. For more information on how BSCMail works, refer to the remainder of this guide.

Happy scheduling!

Advanced section: date formatting

Starting in version 3.3, it is possible to customize the format of the date in the email. To change the date format, enter a custom format in the **Date format string** field of the Manage Email Window. Some codes you can use are:

- yyyy: four-digit year ("2016")
- yy: two-digit year ("16")
- MMMM: full month name ("December")
- MMM: month abbreviation ("Dec")
- M: month number ("12")
- d: day of month ("9")
- EEEE: full day name ("Friday")
- EEE: day abbreviation ("Fri")

You can also use text like commas, spaces, or dashes. If you enter an invalid code, the field will turn pink.

 **BSCMail - Manage Email** [minimize] [maximize] [close]

Pre-schedule text:	Here is tonight's schedule.
Post-schedule text:	Let me know if you have any questions! Sincerely, Volunteer Coordinator
Subject line template:	Volunteer schedule for {date}
Date format string:	d MMM, YY (EEE)

 **BSCMail - Event Email Text** [minimize] [maximize] [close]

To:	seth@upp, halva@ticket
Subject:	Volunteer schedule for 9 Dec, 16 (Fri)
Text:	Here is tonight's schedule. Date: 9 Dec, 16 (Fri) Location: 730 Massachusetts Ave., Auditorium Setup 8:00-9:00: Seth Upp Door 9:00-10:00: Halva Ticket Let me know if you have any questions! Sincerely, Volunteer Coordinator
Actions:	<input type="button" value="Generate Email"/>

More details about this feature may be found in the [Manage Email Window GUI Reference](#).

GUI Reference

Main Window

The BSCMail main window is the starting point when the application is launched. There are a number of buttons on the main window, each performing a different function. Note that the buttons are grouped into three columns: **Manage**, **Create**, and **Help**. The buttons perform the following functions.

The **Manage, Shifts** button opens the [Manage Shifts window](#), which allows you to manage volunteer shifts for events.

The **Manage, Volunteers** button opens the [Manage Volunteers window](#), which allows you to manage the list of volunteers.

The **Manage, Roles** button opens the [Manage Roles window](#), which allows you to define specific volunteer roles.

The **Manage, Email** button opens the [Manage Email window](#), which allows you to define a template for sending scheduling emails.

The **Manage, Event Properties** button opens the [Manage Event Properties window](#), which allows you to define custom properties for your event.

The **Create, Event** button opens the [Event Setup window](#), which allows you to assign volunteers to and write information for a specific event.

The **Create, Email** button opens the [Event Email Text window](#), which displays a custom crafted scheduling message for your event.

The **Help, Help** button opens this user guide.

The **Help, About** button opens a window displaying information about this version of BSCMail.

Manage Shifts Window

BSCMail - Manage Shifts

Manager

Description: Door 9:00-10:00

Roles Required: Manager
Money handling
(Control-click to select/deselect roles)

Display volunteer email: ☐
Display volunteer phone: ☐
Display volunteer notes: ☐

Save Delete Add

The Manage Shifts window allows you to manage volunteer shifts.

The pane on the left lists all the shifts defined in the application. You can auto-sort the list by clicking the **Sort** button, or you can manually move shifts by selecting them in the list and clicking the ▲ or ▼ buttons.

The pane on the right displays the properties of the selected shift.

The **Description** text box displays the shift's description.

The **Roles Required** list control displays the volunteer roles necessary for the shift.

The **Display volunteer email**, **Display volunteer phone**, and **Display volunteer notes** checkboxes all control what volunteer information is displayed in the scheduling message. This information may be displayed on a shift-by-shift basis.

To edit the properties of a shift, select the shift from the list, edit the properties to your liking and click the **Save** button. To delete a shift, select it from the list and click the **Delete** button. To create a new shift, edit the properties in the left pane to your liking and click the **Add** button. The shift will appear at the bottom of the list.

Save Delete Add

The Manage Volunteer window allows you to manage volunteers.

The pane on the left lists all the volunteers defined in the application. You can auto-sort the list by clicking the **Sort** button, or you can manually move volunteers by selecting them in the list and clicking the ▲ or ▼ buttons.

The pane on the left displays the properties of the selected volunteer.

The **Name** text box displays the volunteer's name.

The **Email** text box displays the volunteer's email address.

The **Phone** text box displays the volunteer's phone number.

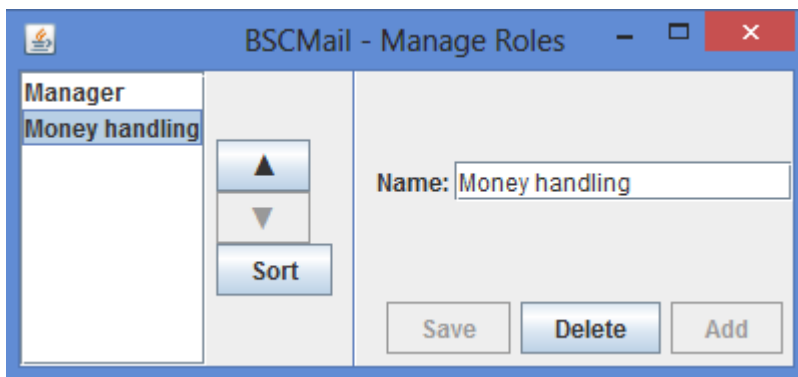

The **Notes** text box displays notes about the volunteer.

The **Active** check box is checked if the volunteer is currently active, or unchecked if the volunteer is inactive.

The **Roles Required** list control displays the roles assigned to the volunteer.

To edit the properties of a volunteer, select the volunteer from the list, edit the properties to your liking and click the **Save** button. To delete a volunteer, select it from the list and click the **Delete** button. To create a new volunteer, edit the properties in the left pane to your liking and click the **Add** button. The volunteer will appear at the bottom of the list.

Manage Roles

The Manage Roles window allows you to manage roles.

The pane on the left lists all the roles defined in the application. You can auto-sort the list by clicking the **Sort** button, or you can manually move roles by selecting them in the list and clicking the ▲ or ▼ buttons.

The pane on the left displays the properties of the selected role. Roles have only a single property, **Name**.

To change the name of a role, select the role from the list, edit the name to your liking and click the **Save** button. To delete a role, select it from the list and click the **Delete** button. To create a new volunteer, enter the new name in the left pane and click the **Add** button. The role will appear at the bottom of the list.

Manage Email Window

The screenshot shows a window titled "BSCMail - Manage Email". It contains four input fields for editing an email template:

- Pre-schedule text:** A large text area containing the text "Here is the schedule for th event."
- Post-schedule text:** A large text area containing the text "Sincerely, Your volunteer coordinator"
- Subject line template:** A text field containing the template "Event for {date}"
- Date format string:** A text field containing the format "EEEE, MMMM d, yyyy"

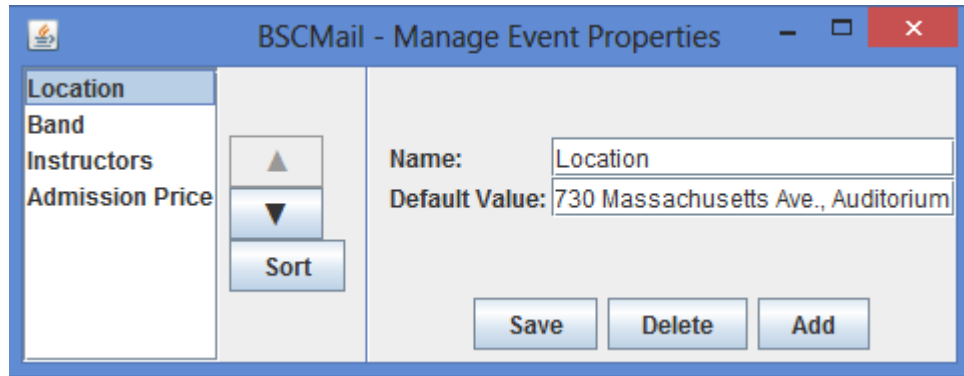

The Manage Email window allows you to edit the email template used to create the scheduling email.

The fields of this window are as follows.

- The **Pre-schedule text** text area displays the text that is placed before the schedule in the scheduling email.
- The **Post-schedule text** text area displays the text that is placed after the schedule in the scheduling email.
- The **Subject line template** text field displays the template used for the scheduling email's subject line. The subject line template is used as the basis for the subject line. Most text appears exactly as typed. The brace characters ({ and }), however, are special and undergo substitution.
 - Bare, single brace characters are simply removed.
 - Double braces ({ { or } }) are transformed into single braces.
 - The string {date} is replaced with the date of the event.
- The **Date format string** defines the format used to display the event date in the subject line and body of the email. The date format string must conform to the format used for a SimpleDateFormat object in Java. (See <https://docs.oracle.com/javase/8/docs/api/java/text/SimpleDateFormat.html>.)

To edit any text field, simply type in the corresponding text area; the changes will be automatically saved. If the date format string is invalid, the background of the text field will turn pink.

Manage Event Properties Window

The Manage Event Properties window allows you to manage event properties.

The pane on the left lists all the event properties defined in the application. You can auto-sort the list by clicking the **Sort** button, or you can manually move event properties by selecting them in the list and clicking the ▲ or ▼ buttons.

The pane on the left displays the properties of the selected event property.

The **Name** text box displays the name of the event property.

The **Default Value** text box displays the default value of the event property.

To edit the properties of an event property, select the event property from the list, edit the properties to your liking and click the **Save** button. To delete an event property, select it from the list and click the **Delete** button. To create a new event property, edit the properties in the left pane to your liking and click the **Add** button. The event property will appear at the bottom of the list.

The Event Setup window allows you to create a specific event and assign data to it. The various data are listed on the window

The first field, labeled **Date**, is the date of the event. You can type in a date or use the up/down control to adjust the month, day, and year.

The next fields are the event properties as defined in the [Manage Event Properties window](#). The properties are all listed in order and filled in with their default values. You can leave them as-is or enter new values for this specific event. This window is dynamic; edits made in the Manage Event Properties window show up here in real time.

The final fields are the shifts as defined in the [Manage Shifts window](#). The shifts are all listed in order. Each shift has a dropdown box containing a list of all the volunteers who are active and eligible for that shift; select one to assign them to the shift, or select “(open)” to select no volunteer. This window is dynamic; edits made to shifts in the Manage Shifts window and edits made to volunteers in the [Manage Volunteers window](#) show up here in real time.

Event Email Text Window

The screenshot shows a window titled "BSCMail - Event Email Text". It contains three main text input areas: "To:", "Subject:", and "Text:". The "To:" field contains the email addresses: halva@ticket, seth@upp, ann@charge, val@unteer. The "Subject:" field contains: Volunteer schedule for Saturday December 3. The "Text:" field contains the following text: "Here is the schedule for the event.", "Date: Saturday December 3", "Location: 730 Massachusetts Ave., Auditorium", "Band: The Frank Franklin Five", "Instructors: Charles Tonne and Linda Hopp", "Admission Price: \$15", "Manager: Ann Charge (555-ANN)", "Setup 8:00-9:00: Seth Upp", "Door 9:00-10:00: Halva Ticket", "Door 10:00-11:00: Val Unteer", "Cleanup 11:00-12:00:", "Sincerely,", "Your volunteer coordinator.", and a blank line. At the bottom, there is an "Actions:" label and a "Generate Email" button.

The Event Email Text window constructs and displays a scheduling email for the event defined in the [Event Setup window](#). The email is based off of the email template defined in the [Manage Email window](#).

The email is placed in three text boxes. The **To** text box lists the email addresses of all the volunteers assigned to the event. The **Subject** text box lists an appropriate subject line containing the date of the event. The **Text** text box contains the email message. All the event properties and shifts with volunteers are listed. Each of the text boxes is editable, so you can make any last-minute alterations you desire.

The **Generate Email** button sends the email using your default email application.

Data Format

The data for BSCMail is contained in XML files stored in the program directory. The files are as follows.

- emailTemplate.xml — the email template
- eventProperties.xml — the list of event properties
- roles.xml — the list of volunteer roles
- shifts.xml — the list of volunteer shifts
- volunteers.xml — the list of volunteers

The data files are updated by the application in real time. They ought not be edited by hand, although they are human-readable for the sake of convenience.

emailTemplate.xml:

- The root element of emailTemplate.xml is <emailtemplate-list>. It contains exactly one child element, <emailtemplate>.

- The <emailtemplate> element corresponds to the application's email template. It contains four child elements: <preScheduleText>, <postScheduleText>, <subjectLineTemplate>, and <dateFormatString>.
- <preScheduleText> is a text node containing the pre-schedule text of the email template.
- <postScheduleText> is a text node containing the post-schedule text of the email template.
- <subjectLineTemplate> is a text node containing the subject line template of the email template.
- <dateFormatString> is a text node containing the date format string of the email template.

eventProperties.xml

- The root element of eventProperties.xml is <eventproperty-list>. It corresponds to the list of event properties. It contains a number of child elements of type <eventproperty>.
- Each <eventproperty> element corresponds to an event property. Each contains three child elements: <name>, <defaultValue>, and <value>.
- <name> is a text node containing the name of the event property.
- <defaultValue> is a text node containing the default value of the event property.
- <value> is an empty node.

roles.xml

- The root element of roles.xml is <role-list>. It corresponds to the list of volunteer roles. It contains a number of child elements of type <role>.
- Each <role> element corresponds to a volunteer role. Each contains one child element: <name>.
- <name> is a text node containing the name of the volunteer role.

shifts.xml

- The root element of shifts.xml is <shift-list>. It corresponds to the list of volunteer shifts. It contains a number of child elements of type <shift>.
- Each <shift> element corresponds to a volunteer shift. Each contains five child elements: <description>, <roles>, <displayVolunteerEmail>, <displayVolunteerPhone>, and <displayVolunteerNotes>.
- <description> is a text node containing the description of the volunteer shift.
- <roles> is a text node containing a comma-delimited list of the volunteer roles required by the volunteer shift.
- <displayVolunteerEmail> is a text node containing the value of the "display volunteer email" property of the volunteer shift.
- <displayVolunteerPhone> is a text node containing the value of the "display volunteer phone" property of the volunteer shift.
- <displayVolunteerNotes> is a text node containing the value of the "display volunteer notes" property of the volunteer shift.

volunteers.xml

- The root element of volunteers.xml is <volunteer-list>. It corresponds to the list of volunteers. It contains a number of child elements of type <volunteer>.
- Each <volunteer> element corresponds to a volunteer. Each contains five child elements: <name>, <email>, <phone>, <notes>, and <roles>.

- <name> is a text node containing the name of the volunteer.
- <email> is a text node containing the email address of the volunteer.
- <phone> is a text node containing the phone number of the volunteer.
- <notes> is a text node containing the notes about the volunteer.
- <roles> is a text node containing a comma-delimited list of the roles possessed by the volunteer.
